Subject: Dimock call 3/16/12 - 4:02pm

Ex. 6 - Personal Privacy

Concerned about the release of the press information implying from EPA re Dimock water is safe to drink. Independent testing has found that quite a few families have contaminated and contain explosive levels methane. Given that these independent findings have found heavy metals and radio-active materials are in the water. I am concerned that these citizens are not being protected.

Why is EPA issuing a statement that things are ok with the water and that independent studies are not confirming that statement. And when the EPA's own studies have not been completed.

I strongly urge EPA to publish its findings on the testing for the Dimock water. So that independent scientists and the public can evaluate the results.

I strongly urge the R3 Administrator to protect the residence of Dimock and ensure that their drinking water is truly safe.
